

Community Resources

07/31/2026 7:58 am EDT

The resources linked below are community-created resources shared by North Carolina Public School Units (PSUs) for use by other PSUs. These resources are not created, maintained, or supported by the North Carolina Department of Public Instruction (NCDPI). Before using any SQL query, Ad Hoc filter, or other shared resource in a production environment, import and test it in a sandbox environment. Review the results to ensure the resource meets local requirements and functions as expected before making it available in production.

The following community resources provide SQL queries, Ad Hoc filters, and other tools shared by PSUs to support data validation, reporting, and third-party integrations.

Community-shared SQL validation reports and related resources.

Labortive

Community-shared Ad Hoc filters and reporting resources.

Community

Community examples of SQL queries and extract formats used for third-party integrations.
